

Introduction

Cancer is one of the leading causes of illness and death in the world, and as the population ages, the global burden of cancer will continue to increase. It is expected that total number of cancer patients worldwide will reach approximately 28 million, and 16.2 million deaths by 2040. Over 40% of cancer cases are attributed to preventable factors such as smoking bans, healthy eating, physical activity, etc. Basic research and innovative therapies are also changing patients' outcome. The future path to fighting cancer requires international cooperation and the promotion of scientific and technological innovation.

This summit will invite anti-cancer leaders of China and Latin-America to jointly explore basic research, share the latest achievements in clinical practice, and exchange ideas and perspectives on the treatment of cancer patients.

Agenda

20:00-20:10 Opening Ceremony

Moderator Prof. Anne Lee, Vice-Chairman, The Hong Kong Anti-Cancer Society

Welcome Remark Prof. Ying Wang, Vice President, China Anti-Cancer Association

20:10-21:10 Keynote Speeches

20:10-20:25 **Vision and perspectives in Global Cancer Control**

Prof Eduardo L. Cazap, President & Founder, Latin-American & Caribbean Society of Medical Oncology (SLACOM)

20:25-20:40 Development of Holistic Integrative Management of Cancer in China

Prof. Daiming Fan, President, China Anti-Cancer Association

20:40-20:55 Current Status of Precision Medicine in Latin America

Prof. Daniel Campos, Director, Clinical Research Institute Latin American & Caribbean Society of Medical Oncology(SLACOM)

20:55-21:10 Cancer Control and Public Policy in the Region

Prof Luiz Antonio Santini, Co-Chair, RINC-SLACOM, Former Director General, National Cancer Institute, Brazil
